

Hotspot

The handheld Hotspot unit is ideal for small repairs, but its main application is for **fillers, stoppers** and **primers**. Removal of old pin stripes curing sealants and baking runs in top coats are other useful applications.

The Hotspot hand held unit is also available mounted to a stand, or alternatively a stand fitted with a single timer. In all cases, it provides a low cost means of curing fillers, stoppers and minor primer and top coat repairs in areas which are difficult to access.

- Handheld
- Stand Mounted
- Stand Mounted with Single Timer
